

Data Analytics Academy — Digital Marketing Campaign Case Study

1. Business Challenge

Data Analytics Academy is a hypothetical online education brand targeting aspiring Data Analytics learners in India. The campaign challenge is to generate prospective-student leads and move them toward course consideration.

2. Objective

Generate qualified workshop leads through Meta Ads using a free Data Analytics Career Workshop as the acquisition offer.

3. Audience

Students aged 20–23, recent graduates aged 22–27, and career switchers aged 25–35.

4. Positioning

Don't Just Complete a Course. Build Evidence. The proposed learning framework is LEARN → PRACTICE → BUILD → PREPARE.

5. Funnel

Meta Ads → Landing Page → Free Workshop → Lead → Nurture → Course Consideration → Retargeting → Enrollment.

6. Campaign Architecture

Cold lead generation is separated into students, recent graduates and career switchers. Warm audiences include video viewers, social engagers and website visitors. Retargeting focuses on landing-page visitors and form openers. Course conversion focuses on qualified/high-intent leads.

7. Creative Strategy

Six creatives were planned: student Reel, graduate carousel, career-switcher Reel, warm carousel, workshop lead-generation ad and retargeting ad. Messaging changes by funnel temperature.

8. Landing Page

The landing page uses a single primary objective: Reserve Your Free Seat. It includes the problem, workshop value, agenda, audience fit, learning framework, FAQ, form and final CTA.

9. Lead Nurturing

A seven-day sequence moves from confirmation to education, portfolio value, workshop attendance, program consideration, objection handling and conversion.

10. Media Plan

A hypothetical ■50,000 test budget is allocated across cold acquisition, warm audiences, retargeting and testing reserve.

11. Measurement

CTR, CPC, CPL, landing-page conversion, qualified lead rate, cost per qualified lead, CAC and ROAS are the main measurement layers.

12. Testing

Five planned tests cover hook, creative format, audience, landing-page headline and CTA.

13. Optimization

The optimization framework diagnoses the funnel stage where performance drops rather than optimizing only for cheap clicks.

14. Portfolio Methodology & Limitation

This is a portfolio-based campaign simulation. The brand is hypothetical and no live paid Meta campaign was executed. Therefore no campaign performance, lead volume, enrollment count, revenue, ROAS, CTR, CPC or CPL is presented as actual.

15. My Role

Designed the end-to-end digital marketing strategy and portfolio assets covering research, audience segmentation, campaign architecture, creative planning, landing-page funnel, lead capture, retargeting, nurturing, measurement, testing and optimization.
